

METHOD FOR SUPPORTING TRANSACTION OF UNLISTED STOCKS AND
UNLISTED STOCK TRANSACTION SERVER USING THE SAME

ABSTRACT

The present invention provides a method for supporting transaction of unlisted stocks, the method comprising: (a) a step in which an unlisted stock transaction server determines a specific reference price of specific unlisted stocks regarding a specific unlisted company; (b) a step in which the unlisted stock transaction server sets limitation conditions regarding both buy orders and sell orders of the specific unlisted stocks with reference to the specific reference price of the specific unlisted stocks; and (c) a step in which the unlisted stock transaction server support transactions of the specific unlisted stocks by performing a process in which at least one specific buy order including at least one specific bid price is acquired while the range of bid prices to be included in the buy orders of the specific unlisted stocks is made to have downward rigidity with reference to the specific reference price according to a first limitation condition among the limitation conditions, and a process in which at least one specific sell order including at least one specific ask price is acquired while the range of ask prices to be included in the sell orders of the specific unlisted

stocks is made to have upward rigidity with reference to the specific reference price according to a second limitation condition among the limitation conditions.
