

ABSTRACT OF THE DISCLOSURE

A selective call receiver (1) comprising a receiver
5 (2) for receiving a coded transmitted message and a
processor (3), in communication with the receiver (2), for
processing and decoding the message. The selective call
receiver (1) also has an alert generator (4) controllable
by the processor (3), for generating a selected alert
10 signal selectable from a plurality of signal types. The
processor (3) allows for storing of one or more user
defined message identification strings used for selecting
from the signal types which alert signal is to be
generated in response to at least part of the coded
15 transmitted message.

FIG. 1 to accompany Abstract.
