Abstract
CONNECTOR

Releasable connector for connecting to a supporting sleeve, preferably made from plastic, the connector serving to connect a functional element to a supporting sleeve, comprising an inner sleeve, the inner sleeve having a standard region for connecting to a supporting sleeve and a functional element for defining the further use, the inner sleeve being configured in one piece, and a sliding sleeve for clamping and opening the clamping of the inner sleeve on a supporting sleeve, the sliding sleeve being arranged on the outer circumference of the inner sleeve in the standard region, the sliding sleeve being arranged in an axially displaceable manner for clamping and opening the inner sleeve on a supporting sleeve.
