

ABSTRACT

DRAINAGE COVER

The present application provides a drainage cover, which comprises a slab body (1) formed by stacking up multi-layers of stones; wherein gaps are formed among the stones of the slab body (1), and the stones adjacent to each other are adhered together at contact portions of the stones, drainage channels of the slab body (1) are formed by the gaps among the stones of the slab body (1), and a drainage groove (11) is defined on the bottom of the slab body. The drainage cover in the present application has an ideal effect for screening, draining and is elegant in appearance.
