

Abstract

"Voice and Tone Synthesis Device"

A plurality of waveform generation sections (104) are provided so as to receive a sound generation start signal (KONCH, KONEXT) instructing a start of sound generation and pitch information (PITCH, EXTP) and form sound waveform signals corresponding to formants of same formant pitch on the basis of the pitch information in response to the sound generation start signal. A control section (103) supplies the sound generation start signal and pitch information to specific one of the waveform generation sections (104). The sound generation start signal and pitch information supplied to the specific waveform generation section are transferred therefrom to another waveform generation section.
