## ABSTRACT OF THE DISCLOSURE

# The liquid medicine-prescribing apparatus for blood vessel injection

A liquid medicine-prescribing apparatus for a blood vessel injection comprising a lowercase (10) which is combined with two lateral faces (10a, 10b), a running part (60) which has the feed means of liquid medicine and which is inserted into a reception space (24) formed by a cover plate (20) which is open and shut by a hinge (300) of lowercase (10) so that mounting and separation may be done, and an uppercase (30) which is open and shut by a hinge (300) of a cover plate (20), and on which the lowercase (10) is combined to be open and shut by forming the reception space (33) which receives liquid medicine pack. Also the liquid medicine-prescribing control circuit, wherein divided are a normal conversion switch NOR SW for normal operation, a switch INJ SW by which a personal conversion switch PCA MODE SW determines prescribing amount by changed value according to each step, and a switch TM SW which determines prescribing time.
