(54) Title: CONTINUOUS PROCESS FOR GAS PHASE COATING OF POLYMERISATION CATALYST

(57) Abstract

The present invention relates to a continuous process for gas phase coating of polymerisation catalyst characterised in that the polymerisation catalyst is introduced in a gas phase plug flow type reactor wherein it is submitted to polymerisation conditions in the presence of at least one monomer such that at least 95 % by weight of the produced coated catalysts have a coating yield comprised between 0.5 to 2 times the average coating yield.
