(54) Title: METHOD AND SYSTEM FOR PROVIDING INTELLIGENT NETWORK CONTROL SERVICES IN IP TELEPHONY

(57) Abstract: A telephony system that comprises a first network (100) and a second network (1), the first system includes a first network control system configured to provide intelligent network control services to the first network, the first network call control system is also configured to store intelligent network control data corresponding to the intelligent network control services. A second network call control system is configured to provide control services to the second network. A secure channel couples the first network call control system to the second call control system and is configured to securely transmit intelligent network control data from the first network call control system to the second call control system.
