

TWISTING APPARATUS

Abstract

The invention relates to a twisting apparatus (1) for twisting of electrical or optical lines (2) such as wires, cables, line bundles, optical fibres etc. in particular a cable
5 twisting apparatus, comprising a base (5) and a twisting head (3) which can be rotated relative to the base (5), which is configured to grip the lines (2) to be twisted at their first ends, characterised in that the twisting apparatus (1) comprises a second twisting head (4) which can be rotated relative to the base (5), which is disposed opposite the first twisting head (3) and which is configured to grip the lines
10 (2) to be twisted at their second ends opposite the first ends and that the second twisting head (3) can be rotated in the opposite direction to the second twisting head (4). The invention also relates to a method for twisting lines.
