(54) Title: DEVICE AND METHOD HAVING A DUCT FOR COLLECTING WASTE WATER FROM TURBINE ENGINE WASHING

FIG. 4

(57) Abstract: A collection apparatus is provided for collecting waste water from cleaning operations performed on aircraft turbine engines. It comprises a frame structure having a pivotally mounted support arm. An actuator device is arranged to rise and lower the support arm between an essentially horizontal transport position to an operative position. A flexible duct is provided with an inlet end and an outlet end. The inlet end of the flexible duct is pivotally attached to the support arm so as to be movable around at least a horizontal axis.
