

A METHOD FOR RETRIEVING AND STORING DATA FROM FIELD DEVICES

Abstract

- 5 The invention discloses a method of retrieving and storing data of a field device, where the data has been previously stored with a pre-defined identifier. The method including the steps of packing the data of the field device into a package, generating a unique identifier for the package, transferring the generated identifier, comparing the transferred identifier with the pre-defined identifier, transferring the packaged data when the transferred identifier differs
- 10 from the pre-defined identifier, unpackaging the transferred data, and storing the unpackaged data and the transferred identifier.
