(54) **Title:** AN INHALER DEVICE

Figure 66

(57) **Abstract:** The present invention relates to inhaler devices (701), and in particular to devices provided with medicament carriers containing individual pockets or blisters of powdered medicament covered by a lidding sheet such as a lidding foil. A common actuator (710) is provided for controlling movement of an indexing system (712, 714) for advancing/indexing a dose and an opening system (790, 791) for opening a dose such that progression of the opening system (790, 791) is disproportional to progression of the indexing system (712, 714) during movement of the common actuator (710).
