

BLACK POLYMERIZABLE COMPOSITION AND METHOD FOR PRODUCING A BLACK LAYER

ABSTRACT

The invention provides a black polymerizable composition having an excellent alkali developer resistance, a wafer level lens, and the like. The black polymerizable composition includes at least: (A) a black material; (B) a polymerization initiator; (C) a polymerizable compound; and (D) an alkali-soluble binder polymer having a weight average molecular weight of at least 30,000 and a polymerizable group at a side chain thereof.
