(54) Title: DENTIFRICE COMPOSITIONS CONTAINING CALCIUM SILICATE

(57) Abstract: An oral care composition includes an effective amount of calcium silicate particles. The calcium silicate particles have an average diameter of less than about 5 microns, such that they can occlude dentinal tubules of the teeth. An oral care method includes applying the composition to an oral cavity of a subject to reduce or inhibit hypersensitivity of the teeth and to achieve other benefits.
