DISPOSABLE DIAPER

A disposable diaper according to the present invention has front and rear waist regions adapted to be separably connected to each other by surface fasteners, each surface fastener comprising a hooked fastener component and a looped fastener component operatively associated with the hooked fastener component, at least a pair of wings extending outward from transversely opposite sides of the rear waist region have their outer surfaces made of nonwoven fabric with which the component can be interlocked, and thereby the invention allows the used disposable diaper to be reliably rolled-up for disposal.

Refer to Fig. 3.
