FIG. 18

Inserting a hollow microneedle into the sclera of the eye
Applying a pressure to induce infusion of a drug formulation through the hollow microneedle
Repositioning of inserted microneedle
Evaluating whether there has been successful delivery delivery into suprachoroidal space and away from insertion site of hollow microneedle
No
Yes
Continued infusion of selected volume of fluid drug formulation before removing pressure
Retracting of microneedle from the eye
