[ABSTRACT]

A wireless resource is utilized efficiently.

An information processing apparatus is an information processing apparatus that includes a control unit. The control unit provided in the information processing apparatus performs control for aborting, when a packet decided to be transmitted from a second network different from a first network to which the own apparatus belongs is detected, reception of the packet. Further, the control unit provided in the information processing apparatus performs control for dealing with carrier sense as an idle state based on a reception strength of the packet decided to be transmitted from the second network.
