

METHOD AND SYSTEM FOR PROVIDING FOREIGN CURRENCY EXCHANGE SERVICES BASED ON NET EXCHANGE DEMAND BETWEEN COUNTRIES

5 ABSTRACT

According to an example of the present invention, a method for providing foreign currency exchange services is provided. The method comprises: when a request of a foreign currency exchange is received from a user terminal in a first country, providing deposit request information
10 corresponding to the request of the foreign currency exchange; when it is confirmed that a payment is completed, generating a virtual wallet and depositing an amount of money of a currency of the first country, which is currency-exchanged into a currency of a second country; providing the user terminal with withdrawal identification information after confirming a balance of
15 the virtual wallet; and when input information of the user is received and corresponds to the withdrawal identification information, causing the withdrawal of the amount of money of the foreign currency exchange to be performed within an amount of money deposited in the currency of the second country.
