

VERIFICATION DEVICE, VERIFICATION SYSTEM, AND VERIFICATION METHOD

ABSTRACT

5 A verification device used in a gate equipped with a restriction unit that restricts a
flow of people. The verification device is provided with: a processing unit for performing,
in a path in which there is a flow of people from a first area to a second area located
upstream of the restriction unit, a second face image verification using a first candidate
face image having been narrowed down by the result of first face image verification using a
10 first image in which the first area is imaged and a second image in which the second area is
imaged; and a communication unit for outputting the result of the second face image
verification.
