The crude gas flows through one or several parallel venturi tubes with or without a low pressure loss of up to 30 mbars, preferably 20m bars, and said tube(s) is/are sprayed with a washing liquid by one or several periodically pulsating hybrid nozzles.</p> <b>(57) Zusammenfassung</b><br><p>Verfahren und Vorrichtung zur Naßreinigung von Rohgasströmen, bei dem der Rohgasstrom ohne oder mit einem geringen Druckverlust bis 30 mbar, bevorzugt bis zu 20 mbar, durch eine oder mehrere parallele Venturikehlen strömt, der oder die durch eine oder mehrere periodisch pulsierende Hybriddüsen mit einer Waschflüssigkeit besprüht werden.</p> |           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
