

ABSTRACT

Disclosed in the present application are an information display method and apparatus, and an electronic device and a computer-readable medium. The method comprises: when a live-streaming entry aggregation interface is being displayed and several candidate live-streaming entry signs are displayed on the live-streaming entry aggregation interface, and when a trigger operation for the live-streaming entry aggregation interface has been received, determining a target live-streaming entry sign from the candidate live-streaming entry signs, and displaying a channel page corresponding to the target live-streaming entry sign, wherein the channel page comprises a live streaming preview area, a live-streaming entry recommendation area and a recommended information flow display area, the live streaming preview area being used for playing a preview live-streaming information flow corresponding to the target live-streaming entry sign, the live-streaming entry recommendation area being used for displaying recommended live-streaming entry signs, and the recommended information flow display area being used for displaying candidate live-streaming information flows. Therefore, the live streaming viewing experience required by a user can be better met, and the user experience can be effectively improved.
