

**BISPECIFIC ANTIBODY-CYTOKINE FUSION PROTEIN AND USE
THEREOF**

ABSTRACT

5 Provided is a bispecific antibody-cytokine fusion protein. Specifically
provided is a bispecific antibody-cytokine fusion protein targeting to TIGIT and
PD-1 and having immune effector cell activation effect. The bispecific
antibody-cytokine fusion protein has good medication safety and anti-tumor
effect. Also provided is the use of the bispecific antibody-cytokine fusion
10 protein in disease treatment.
