【Fig. 8】

Pre-assemble the bottom layer rebars of the foundation slab, foundation steel columns, the upper layer rebars of the foundation slab, and the foundation rebars completely.
41
The pre-assembled bottom layer rebars of the foundation slab, foundation steel columns, upper layer rebars of the foundation slab, and foundation rebars are delivered to the construction site and assembled to a raft foundation.
42
Use pivot elements to connect rebars of the foundation slab with one another. After the assembly is completed, build a formwork around the outer part of the frame of the pre-assembled raft foundation and pour concrete in the formwork.
