

Abstract

Handrail (1) mountable on a guide element for moving walkways, escalators or the like, having a largely constant cross-section along its profile direction (C). The
5 handrail (1) comprises: a carcass (2), which can be arranged on the guide element, and a cover layer (3), which is arranged on the carcass (2). The cover layer (3) comprises a thermoplastic elastomer. Furthermore, a method for manufacturing a handrail (1) is provided.
