

DOCUMENT PROCESSING METHOD AND DEVICE, AND PAGE PROCESSING METHOD AND DEVICE

ABSTRACT

Provided are a document processing method and device, and a page processing method and device. The document processing method comprises: displaying a target document in a display interface (101); detecting an operation, which is executed by a user in the display interface, for drawing a specific shape, and obtaining a target area corresponding to the specific shape (102); acquiring annotation content entered by the user for target content corresponding to the target area (103); and updating and displaying the target document on the basis of the association relationship between the target content and the annotation content, such that the target document displayed in the display interface contains the annotation content that has an association relationship with the target content (104). Therefore, the document annotation efficiency is improved.
