WO 03/068257 A1

(54) Title: CANCER THERAPY

(57) Abstract: The present invention provides methods for treating a cancer patient. The methods rely on theobservation that cells of the immune system which target a tumour cell ("effector cells") clonallyexpand before a population of "regulator" or "suppressor" cells which down-regulate the activity of the immune cells which target the tumour cell. Methods are provided herein which stimulate effector cell production and also provides means for inhibiting the production of, limiting thefunction of, and/or destroying, regulator cells, in the treatment of cancer.
