

MACHINE FOR DISPENSING CASH

ABSTRACT

Disclosed is a machine for dispensing cash. The machine comprises an interface for receiving user data, the user data comprising payment vehicle data. The interface includes a payment
5 vehicle reader for reading the payment vehicle data from a payment vehicle of a user and an input device for receiving an input of at least one additional identifier, the user data comprising the at least one additional identifier if the at least one additional identifier is inputted. The machine further comprises a communication module in communication with a processor, for sending the user data to the processor and receiving, from the processor,
10 account data of an account associated with the user, the account being identifiable using the user data, the account data comprising one or more entitlements, each entitlement representing an award to which the user is entitled, wherein the interface is configured to receive a selection of at least one entitlement of the one or more entitlements. The machine also comprises a cash dispensing device for dispensing cash in the event that the
15 selection of at least one entitlement comprises a selection of an amount of cash.
