

ABSTRACT (FIG. 1)

"ELEVATOR CONTROLLER"

According to one embodiment, an elevator controller includes a display controller that  
5 determines display content including a floor position of one of the cages, which is to be displayed in an elevator hall of each floor in a building which uses the elevator car, based on i) an operating mode which is being selected among a plurality of operating modes  
10 differing in sets of the cages and floors where the cages can stop, and ii) an operational state of the elevator car, and displays the determined display content on a display unit in the elevator hall of each floor in the building.
