

Abstract

This measurement device (20) for measuring the angular velocity or acceleration of a two-wheel vehicle, is provided with a main detection unit (21) which detects the three-axis angular velocity or three-axis acceleration, a support unit (22) which can support the main detection unit on the body of the two-wheel vehicle, and a correction unit (23) which cancels the lean of the body to the left and right in the main detection unit (21).
