CARGO LOADING SYSTEM AND CARGO LOADING METHOD USING THE SAME

ABSTRACT

The present disclosure relates to a cargo loading system and a cargo loading method using the same. The present disclosure includes an input unit configured to receive first information including one or more of the volumes and weights of cargos and generate cargo information, a loading unit configured to generate loading information by determining the state in which the cargos have been disposed in a container by using the cargo information, and an output unit configured to output the loading information through an output device.
