ABSTRACT

CPU CHIP PARTS FOR ELECTRONIC GAME MACHINE AND SUBSTRATE LOADED WITH SAID CPU CHIP PARTS USABLE FOR ELECTRONIC GAME MACHINE

Disclosed is a CPU chip parts solely usable for an electronic game machine such as a "pachinko" game machine or a slot machine for example installed in any game-playing hall. A through-hole penetrating a package in the thickness direction is formed in the package of the CPU chip parts in a portion at which neither a CPU chip nor a lead wire is internally accommodated.

By virtue of formation of the through-hole, space needed for illegally fixing an illegal ROM chip parts inside of the package is minimized. Even when such an illegal ROM chip parts has already been fixed therein, illegality can readily be detected.
