

ABSTRACT

METHOD, DEVICE, AND RELATED EQUIPMENT FOR DETERMINING CANDIDATE PDSCH RECEIVING OCCASION

The present disclosure discloses a method, a device, and related equipment for determining occasions for candidate PDSCH receptions. The method includes: determining target time domain resources, the target time domain resources being related to at least one of the following: first time domain resources indicated by the network-side device for the terminal; second time domain resources for multicast services sent by the network-side device; third time domain resources for broadcast services sent by the network-side device; fourth time-domain resources corresponding to a not configured subcarrier spacing; according to the determined target time domain resources, determining, occasions for candidate PDSCH receptions related to Hybrid Automatic Repeat Request-Acknowledgment (HARQ-ACK) information.
