ABSTRACT

Disclosed in the present application are a data processing method and apparatus, an electronic device, a computer-read-able storage medium and a computer program product. The method comprises: in response to a trigger operation for a multi-view video, displaying a virtual video space scene corresponding to the multi-view video; in response to a scene editing operation for the virtual video space scene, acquiring target data of a first target in the virtual video space scene, wherein the first target refers to a target who has initiated the trigger operation for the multi-view video; and playing back in a virtual display interface a created video associated with the multi-view video, wherein the created video is obtained by editing and processing the virtual video space scene on the basis of the target data.
