DOUBLE MAST STORAGE/RETRIEVAL MACHINE

ABSTRACT

The present invention relates to a double mast storage/retrieval machine, belonging to the technical field of warehousing logistics. The double mast storage/retrieval machine includes an upper beam, a lower beam, masts, a carriage, a lifting motor, a winding drum, a steel wire rope, an upper beam rope sheave, a steel wire rope hanging clamp and a carriage rope sheave; two masts being disposed between the upper beam and the lower beam; the carriage being disposed between the two masts; the lifting motor and the winding drum being disposed on the mast on one side, the upper beam rope sheave being disposed on one side of the upper beam above the winding drum, and the steel wire rope hanging clamp being disposed on the other side of the upper beam. The present invention has the advantages of simple structure, high working efficiency, stable walking, large carrying capacity and small noise.
