(54) Title: METHOD OF PROTECTION OF DATA DURING THE EXECUTION OF A SOFTWARE CODE IN AN ELECTRONIC DEVICE

(57) Abstract: The invention is a method of protecting a data intended to be accessed by an operating system embedded in an electronic device. The operating system is intended to manage an object comprising a header and a body. The data is stored in the body. The object is recorded in a memory of the electronic device. The electronic device comprises a memory manager able to provide access to the memory. The memory manager forbids the operating system to access the body as long as a preset action has not been successfully performed.
