PDE inhibitors and combinations thereof for the treatment of urological disorders

Abstract

The invention provides pharmacological compositions comprising PDE-5 and PDE-4 inhibitors, alone or in combination, for the treatment of urological disorders comprising Benign Prostate Hyperplasia (BPH), Lower Urinary Tract Symptoms (LUTS) and in particular irritative symptoms caused by BPH-induced bladder outlet obstruction (BOO). The invention also provides methods of screening for such PDE-5 and PDE-4 inhibitors for use, alone and in combination, in the preparation of medicaments for the treatment of said urological disorders.
