Abstract

10 Filter device

The invention proceeds from a filter device which is provided for stabilising a liquid, in particular beverages, having at least one filter unit (10), in particular a membrane filter unit, which has at least one filter element (12) and at least one integrated stabiliser (14).

15 It is proposed that the filter unit (10) has at least one further integrated stabiliser (16).

It is proposed in a further aspect of the invention that the filter device comprises at least one first precursor (18) which is provided for forming the filter element (12) at least partially, and the same first precursor (18) is
20 provided for forming the stabiliser (14) at least partially.
