ABSTRACT

An object of the present invention is to find an effective method for treating cancer and to provide the method in the form of a drug. A medicament comprising a combination of
5 a compound represented by formula (I),

a salt thereof, a solvate thereof, an N-oxide thereof, or a prodrug of these and an immune
checkpoint inhibitor (such as an anti-PD-1 antibody) is provided. The combination of the
present invention exhibits a strong anti-tumor effect and thus is useful for the treatment of
10 cancer.
