(54) **Title**: METHOD AND APPARATUS FOR DATA TRANSMISSION IN WIRELESS NETWORK

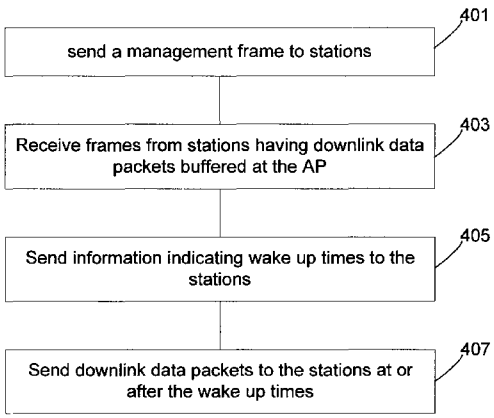

FIG. 4

(57) **Abstract**: In a wireless local access network (WLAN), an access point (AP) broadcasts a beacon frame to a plurality of stations. The AP receives an indication frame from a station of the plurality of stations. The indication frame indicates that the station is available to receive a data packet for the station buffered at the AP. The AP indicates to the station a wakeup time for the station to wake up, and sends the data packet to the station at or after the wakeup time.
