

Element packaging apparatus and method thereof

Abstract of Disclosure

Disclosed is an element packaging apparatus, comprising: at least an element supplying device (20); at least one element processing device (30) configured to be capable of processing an element supplied by the element supplying device (20); at least one element transferring device (40), each of the element transferring devices (40) respectively having a plurality of linking heads (41), and each of the linking heads (41) being used to transfer an element that has been processed by the element processing device (30); wherein the element processing device (30) comprises a pick-up platform (37) configured to be capable of arranging a plurality of elements simultaneously, and the plurality of linking heads (41) are configured to be capable of simultaneously picking up a plurality of elements from the pick-up platform (37). The pick-up platform (37) can be used to simultaneously arrange a plurality of elements, and the plurality of linking heads (41) can simultaneously pick up a plurality of elements at once from the pick-up platform (37), thus increasing the production efficiency of the apparatus.
