(54) Title: FINANCIAL TRANSACTION SYSTEMS AND METHODS

FIGURE 1

(57) Abstract: A computer-implemented method for facilitating the transfer of funds from a sending account to a receiving account, the method including the steps of: receiving first data from a first device, the first data including: first transaction data representing a first portion of information required to transfer the funds; and second device identification data uniquely identifying a second device; transmitting request data to the second device identified by the second device identification data, at least a portion of the request data being derived from the first data; receiving from the second device second transaction data representing a second portion of the information required to transfer the funds; and generating combined transaction data from the first transaction data and second transaction data for subsequent transmission to a transaction processor.
