(54) Title: LAPTOP LIFT CASE

(57) Abstract: The present disclosure provides various embodiments of cases for lifting portable electronic devices (PEDs) from a compartment of the case. Such a case may comprise a compartment with a rear wall and a front wall coupled to the rear wall with a space disposed between the walls. A lift member may be at least partially disposed within the compartment with an end of the lift member coupled to the front wall. The lift member may comprise a handle and a cradle portion. The cradle portion may support the PED within the compartment and upwardly lift the PED relative to the compartment when the handle is upwardly displaced by a user. Accordingly, a larger portion of the PED is exposed outside of the compartment allowing for easy removal of the PED from the compartment.
