(54) Title: A MULTI INTERNET SERVICE PROVIDER SYSTEM AND METHOD OF THE SAME

(57) Abstract: Disclosed in the present invention is a multi Internet service provider (hereinafter, it is abbreviated a ISP) system and implementation method thereof, in which a plurality of ISP operators share one single ISP system to provide Internet services to each ISP subscriber, by pre-storing the information about the online connecting means connected to the personal computer of the user who wants to transceive the online information with the external online network through the online network of the subscribed ISP and the information about the IP address the ISP uses to the IP address assigning means, finding out the information on the PC and the online connecting means in case the PC intends to access to the ISP online network, and connecting the PC and the online connecting means to the subscribed ISP online network out of the plurality of ISP online networks. Accordingly, the present invention is ver useful for preventing duplicated investment on the same facilities like the ISP system, and preventing national economic loss.
