

ABSTRACT

Embodiments of the present inventions disclose an information processing method and apparatus, a device and a storage medium. The method comprises: in response to receiving an instruction of displaying a livestream room control in a session interface of a target session, determining that a preset livestream room corresponding to the livestream room control is in a livestreaming state and at least one preset event in the preset livestream room is in a triggered state, displaying the livestream room control in the session interface, and displaying associated information of the preset event in a first area in the session interface.
