(54) Title: METHOD FOR MANUFACTURING VIRAL VACCINES AND COMPOSITIONS THEREOF

(57) Abstract: Present invention provides a method of producing clarified virus pool of virus to obtain a lyophilized/freeze-dried live attenuated virus immunogenic composition/ formulation comprising atleast one or more than one antigens/immunogens. Present invention provides a method of producing a clarified virus pool of viruses such as measles, mumps, rubella. It provides the improved large scale affordable /safe manufacturing processes (encompassing cultivation, purification & formulation stages) that utilize minimum animal origin components, provide high virus yield, ensure virus integrity/stability preservation across manufacturing & storage.
