Title: WRIST SUPPORT DEVICE

(57) Abstract

A device (10) for supporting a wrist of a person operating a computer mouse or keyboard, the device includes a deformable body (11) having a flexible enclosure (12) which is at least partially filled with a flowable material (13) such as a fluid, liquid or gel; and a support member (14) being less deformable than said body, wherein the deformable body (11) is movable relative to the support member (14). The support member may include a second enclosure containing a flowable material or alternatively a deformable solid material. Suitably, a flexible plate member is associated with the second enclosure in order to resist bunching thereof when the support device is in use.
