(54) Title: METHOD OF SECURELY STREAMING DIGITAL CONTENT OVER CONTENT DELIVERY NETWORK

(57) Abstract: The method comprises the following steps, per-
formed by a content delivery network (300): - receiving a content
segment request containing a token containing an entitlement tag for
restricted use, - in response, checking the token, and, upon a suc-
cessful check of the token, transmitting the requested content seg-
ment to a requestor, - for each of a plurality of received content seg-
ment requests, extracting the entitlement tag from the token of the
content segment request and storing a record including at least the
extracted entitlement tag; - analyzing the stored records to detect if
the number of instances of a same entitlement tag within a predeter-
mined time period exceeds a threshold; - in case of a positive detec-
tion, storing said entitlement tag in a list of non-trusted tags.
