(54) Title: DECORATIVE EFFECT COATING COMPOSITIONS AND METHODS OF MAKING AND APPLYING SAME

(57) Abstract: The disclosure is generally related to a coating composition, and more particularly to a decorative effect coating composition capable of producing a multicolored and/or multishaded appearance in a single application. The multicolor effect arises through multiple tinting colorants that are substantially immiscible and which separate into separate layers upon application. The color difference between the two layers should be at least about 0.25 delta E units. Additional decorative effects may be applied through shearing the surface with a putty knife or other instrument while the coating composition is still in the liquid or semi-liquid state.
