

**Holder for a Container Connector, Apparatus and Method For Container Coning
And/Or Deconing**

- 5 A holder for container connector, an apparatus comprising the holder and a method using the holder,
the holder comprising a pocket for receiving a connector; a support plate on which a portion of the
connector rests; a support member for mounting the holder to a conveyor mechanism for moving the
holder between several locations, wherein the support plate is selectively pivotable upon activation
of a dispensing mechanism to tilt the connector to dispense the connector from the pocket by gravity,
10 wherein when the holder is mounted to the conveyor mechanism, the connector is maintained in an
upright orientation that is not tilted to the tilting angle until the dispensing mechanism is activated.
