(54) Title: SURGICAL RETRACTOR

FIG. 1

(57) Abstract: A surgical retractor assembly and related attachments are provided to assist in surgical procedures. The surgical retractor provides for increased flexibility and ease of assembly. The surgical retractor may, for example, comprise two frame segments configured so that they may be coupled together using a connector that allows one frame segment to be vertically positioned above a second frame segment and lowered onto the second frame segment so that a top surface of the second frame segment is received within a connector channel. The frame segments may thus be coupled together to form an adjustable frame.
